

Y70 DL Distro

Installation Guidelines

Guidance

- Pumps - Connect each pump to a fan header on the motherboard or a fan controller.
- RGB Strips - Connect the DRGB strips to a DRGB LED Header on either the motherboard or a DRGB controller.

Notice

Please read this manual before starting. Installing this block requires some advanced hardware knowledge. If unsure, please contact Bitpower support for assistance.

• Leak Testing

Use a leak tester like the Bitpower Digital Leak Detector after assembly and before adding coolant.

Do not test with liquid in the loop or while the pump is running.

Do not exceed 0.5 kg/cm²(7.0PSI). Excess pressure may damage components. Bitpower is not liable for damage caused by misuse.

• Installation Caution

Avoid overtightening unless specified. Excessive force can damage components.

• Coolant Recommendations

Use only Bitpower Coolant and Dye for optimal results.

Avoid distilled water or non-recommended coolants, as they can cause:

Coating peel

Scale and algae buildup and clogs

O-ring/tube degradation

Pump malfunction

Bitpower is not responsible for issues from using other liquids.

• Material Compatibility

Do not mix different metals in your loop.

Never use aluminum with Bitpower components. This can cause damage, leaks, and void the warranty. Contact support if unsure.

• Disclaimer

Product design and color may change without notice and may differ from images online.

PUMP SPECIFICATION
Rated voltage : 12V DC
Power consumption : 15W
Maximum flow : 11±15% L/min
Noise : ≤40dBA
PWM : Yes
MTBF : 15000 hours
Warranty : 2 years
Dimension : 62 x 62 x 46.7mm
Maximum lift of the water pump : 5.5±0.5m
